

An efficient web based system for transportation and emergency medical providers

With over 10 years experience, WEBDoctor® has collaborated with transportation and emergency medical providers to make WEB Xpress® available to all sized transportation providers including emergency, non-emergency and CCT services.

WEB Xpress® tackles the complex demands of call scheduling, dispatching, and billing for transportation providers by providing a single solution. WEB Xpress® is the most efficient way to increase profits and streamline your dispatch center and billing workflow.

WEB Xpress® Features

- ▶ User Friendly Dashboard
- ▶ Unlimited Number of Users Included in Cost
- ▶ Makes Your Entire Operation More Efficient
- ▶ Web Based dispatch solution for information anywhere in the World
- ▶ Color Coded Dispatching Clearly Defining Each Call
- ▶ Prevent Incomplete Patient Billing Information
- ▶ Eliminate Inefficient Paper Processes
- ▶ Dispatching and Billing Integration
- ▶ Reports are easy to create and view
- ▶ Reports Valuable data to help improve business processes
- ▶ Ability to use with any device to connect to the system without having to Sync

- ▶ Training Included
- ▶ Unlimited Customer Support
- ▶ Track and Report Activity on each call, track arrival, dispatch, en route, and clear times
- ▶ Easily Defined User Roles

WEBeXpress® Benefits

Web Based

WEBeXpress® web based system allows for operational status and activity to be monitored without being physically present in the communications center.

A web based system provides for remote access to live information without sacrificing security. Multiple users can be on the system at the same time. Mobile devices such as mobile phones, iPad®, netbook, laptops as well as desktops can access the system at the same time.

Dispatching Made Easy

Dispatchers are able to allocate resources quickly through the easy to use dashboard. Call scheduling and dispatching is quick with automated return call features and highly visible information summaries.

WEBeXpress® dynamic technology color codes active calls on the dashboard and relays information such as time of call received, location of call, patient information, and nature of call as well as assigned unit, status of call including appropriate times to the dispatcher. WEBeXpress® assists dispatchers to expedite response times and adjust field personnel as needed while monitoring more than one call at a time on the dashboard.

Security

WEBeXpress® uses the highest security available, 128bit encryption, which is the same encryption used for online banking. Information can be restricted at the user level; logging actions without sacrificing data or security integrity.

One Solution

WEBeXpress® is a single solution for call scheduling, dispatching and billing. There are no more hodgepodes or making due with two separate systems. Patient and call information is received on the dispatching dashboard and is seamlessly integrated within the billing module. Additional call data can give more details such as caller information, priority, response area, and payment information for billing purposes.

Reporting

WEBeXpress® is able to provide companies with the means of managing dispatch and billing data accumulated each day.

WEBeXpress® gives you the ability to create dozens of statistical reports including user logs, dispatch times, vehicle logs, mileage, reporting of late scheduled calls, as well as important financial reports.

WEBeXpress® records users sign-on and sign-off times, administrative changes, and other changes made within the system. Reports are easy to create and view. There is no extensive training needed to create needed reporting.

Cost

Since WEBeXpress® is web based, the cost for a complete solution is less expensive than traditional client/server based software. There is no need for expensive servers, data rooms, or backup UPS.

Multiple devices can be used with WEBeXpress® including Apple iPad®, mobile phones, netbooks, notebooks, and even desktop computers, saving your company capital to invest elsewhere.

Additional costs for updates and users are a thing of the past. All updates and additional users are included in the cost.
